[How To Install Fmcb On Ps2 Slim With Ar Max](#)

[How To Install Fmcb On Ps2 Slim With Ar Max](#)

0 runtime like it says it does. I have, of course, the network adapter and I have a 20 GB Seagate hard disk in there.

I came home, loaded the AR Max right up, and inserted one of my San Disk USB to MS Pro Duo adapters with a MS Pro Duo installed.. I've tried hooking up the USB drive at various points, and nothing allows it to be seen in the AR Max menu, although it does have blank spaces next to the memory cards.. So far so good Now, when I want to install the actual FMCB build I can't select the menu point 'multi install'.. Although damaging anything when following this tutorial seems extremely unlikely.

In some older versions I can select 'multi install' but then an error pops up Something with DVDELF.. ELF with a different version Boot up the Action Replay Max Evo disc in the PS2, without the USB-drive.. I want to install FMCB on the slim model I've burned a disc with uLaunchELF which I can boot with my TEST PS2.

If you don't already have a file archiver, I suggest 7-Zip () The root of the USB-drive should contain: • INSTALL • MaxSettings • 00000_180_ActionRepl.. Is there a way to install FMCB for multi consoles on my TEST PS2? I've tried already some different versions of FMCB.. It said specifically 'swap discs', not Swap Magic I tried swapping discs at various points, to absolutely no avail.. Nov 25, 2012 - I have a PS2 FAT and I'd like to hack it, to use Linux, install my games on the HDD.

Credit where credit is due: OLLis8h aka N73User who have made these instructions and created the necessary archives.. Another method is supposedly to hook the PS2 to your PC and have the PC serve as a file server for the Action Replay.. I supply here a rewritten and English version of these instructions which were in German, and can be read in their original state at this link: Those who have the fat PS2 may also use the PS1 Exploit by pepsi_max2k, found at: This guide is intended for those who have wound up with a Action Replay Max Evo disc with no media player.. max • codelist bin • FREE_MCBOOT ELF Optional step: Replace INSTALL and FREE_MCBOOT.. If you have a disc with Max Media Player, you'll be better off following this guide by JNABK: For this guide one needs the following materials: -Action Replay Max Evo without media player -USB-drive, formatted in FAT32 -OLLi_s8h – FMCB v1.. 8 If another version is desired one should just swap the one in the archive with the other one (this is more precisely covered in the appropriate part of the guide).. One way has the user make a CD-R with certain files on it, the 'boot it using your swap discs'.
